### DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14, drawn to apparatus, classified in class 239, subclass 380.
- II. Claims 15-19, drawn to assembly, classified in class 401 subclass 34.
- III. Claims 20-23, drawn to method, classified in class 239, subclass 7.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the apparatus is independent in its designated use, for example, the bell cup (22) could be utilized as a hand-held device, not needing a dedicated zone for its use. The subcombination has separate utility such as it does not require the apparatus in order for its layout to be successful in use, for example, the layout of the zone could easily be utilized for vehicular cleaning, with water spray nozzles substituting for rotary atomizers.

3. Inventions III and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially

Art Unit: 3752

different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method claims to not specifically tie their use to the apparatus as disclosed

4. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the spray zone as claimed would not have influence on how the paint is atomized, and its color adjusted, at a specific droplet size onto a vehicle.

5. A telephone call was made to Attny. Raymond E. Scott (Reg. No. 22981) on February 2, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
